PRESS RELEASE

Green ASC VET Enters Its Final Phase: Innovative Results for More Inclusive Vocational Education in Europe

The Erasmus+ project Green ASC VET is entering its final phase after two years of intensive collaboration among international partners committed to improving vocational education and employment opportunities for autistic individuals.

Throughout the project, numerous innovative resources have been developed to enhance access to education, career guidance, and the labour market. Special attention has been given to digital technologies, including virtual reality applications, 360-degree career exploration videos, and interactive learning materials.

During implementation, the project considerably expanded its original scope. Alongside the planned outputs, additional tools, manuals, videos, and digital learning resources were created, increasing both the quality and practical value of the project's outcomes.

One of the project's greatest strengths is the active involvement of autistic individuals, education professionals, employers, and civil society organisations in the development process.

The Green ASC VET Final Conference will take place on 29 September 2026 at the European Parliament in Brussels, where project results, good practices, and recommendations for the future of inclusive vocational education in Europe will be presented.
