PRESS RELEASE

Going Beyond Expectations: How Green ASC VET Expanded Every Project Result

One of the most significant achievements of Green ASC VET is the successful expansion of every project output beyond the objectives initially outlined in the project proposal.

Throughout implementation, the partnership continuously identified new opportunities to increase the quality, accessibility, and practical relevance of the developed resources. As a result, additional educational tools, VR experiences, 360-degree career exploration materials, guides for educators and employers, and a wide range of digital resources were created.

A particular focus was placed on helping autistic individuals better understand educational pathways, workplace environments, and professional expectations before entering a specific occupation.

The project demonstrates how European cooperation, professional expertise, and active stakeholder involvement can produce solutions that exceed expectations and provide long-term value for vocational education systems.

The Green ASC VET consortium believes that this added value represents one of the project's most important contributions to inclusive vocational education across Europe.
