PRESS RELEASE

From Education to Employment: How Green ASC VET Connects Skills, Technology, and the Labour Market

One of the main objectives of Green ASC VET has been to support autistic individuals in their transition from education and training into employment.

To achieve this goal, the project developed innovative tools that connect learning experiences, career guidance, and real workplace environments. Among the most notable outputs are the 360-degree career exploration videos, which allow users to virtually experience different professions before making career decisions.

This approach reduces uncertainty, improves understanding of workplace expectations, and helps build confidence in future employment pathways.

The project demonstrates how modern technologies can significantly enhance career guidance services, particularly for individuals who benefit from structured and visual learning methods.

Importantly, the resources developed through Green ASC VET are not only valuable for autistic individuals. Many of the project's outputs can also support neurotypical learners, trainees, and job seekers, further increasing their long-term impact and relevance.
